DETAILED ACTION

Response to Amendment

1. Applicant's arguments with respect to claims 12 and 15 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 11 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Rohani et al (U.S. Patent No. 5,390,166).

Regarding claim 11, Rohani et al (Rohani) discloses a method for digital radio transmission of data between a fixed station (14) and at least one mobile station (17) at one of a number of carrier frequencies, the method comprising the steps of:

transmitting data in a number of time slots (41 of each frame in FIG. 4) using a time-division multiplex method (col. 2, lines 4-9), the data being transmitted in active time slots (41 of each frame) each of which is followed by an inactive time slot (42) in which no data is transmitted, the inactive time slot having a time duration shorter than a time duration of an active time slot (col. 4, lines 13-17); and

changing from a first carrier frequency to a second carrier frequency after a predetermined time period having an order of magnitude of one time slot, wherein change from

Art Unit: 2663

the first carrier frequency to the second carrier frequency is performed during the inactive time slot by a RF module (Frequency Synthesizer 21).

Regarding claim 13, Rohani further discloses that the data is transmitted using a time-division multiplex duplex method, see FIG. 4

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 12 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rohani et al (U.S. Patent No. 5,390,166)..

Regarding claim 12, refer to the discussion for claim 11. However, Rohani et al (Rohani) does not explicitly teach that a time duration of the inactive time slot is half of the active time slot. With reference to the col. 4, lines 13-18, slot 42 and slot 43 could be combined in one time

Art Unit: 2663

slot. Therefore, it would have been obvious to one having ordinary skill in the art to incorporate an inactive time slot having half-time duration as claimed without deviating from the broad principle and spirit of the present invention of Rohani.

Regarding claim 15, Rohani does not explicitly teach that the data is transmitted in a 2.4 GHz band. It would have been obvious to one having ordinary skill in the art to incorporate the method of Rohani into 2.4 GHz band to use for ISM band without deviating from the broad principle and spirit of the present invention of Rohani.

Allowable Subject Matter

7. Claims 16-19 are allowed.
8. Claims 14 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
